

IIS Raffaello Preparation works Turkish mobility

Preparation works have been divided into 3 parts, considering that Turkish mobility participants belong to three different classes.

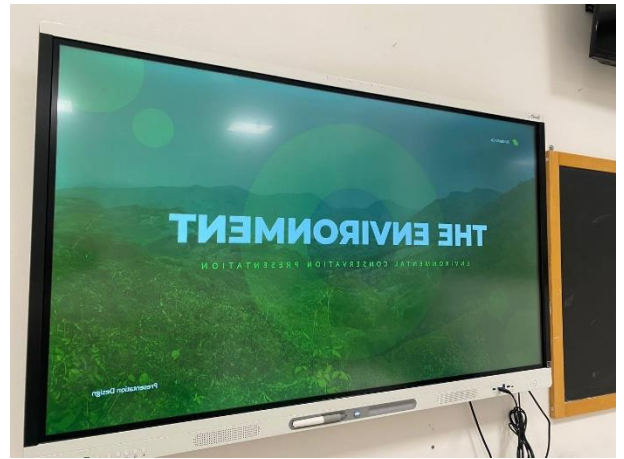

The aim of the project was food waste and preparation focused on 3 main targets:

- 1) how to reduce food waste reusing some ingredients that we usually Throw away;
- 2) to understand if our citizens know the importance not to waste food and of shop sellers are already doing something to avoid food waste
- 3) the use of some app as too good to go.

The research concerning Waste food has been planned inside and outside the school, trying to involve a good number of persons, considering that argument is something shared between citizens.

Otherwise it was important to share good habits between students and their families, as the use of no-waste food app, in order to develop a new awareness.

Each class worked on an item producing different works such as recipes to reuse aquafaba and coffee in order to use foods in every single part. On the other hand a group prepared a google moduli addressed to school families in order to understand their habits. 200 families replied and results showed that a big percentage pay attention to food waste, trying to reuse food without waste.

Another part doesn't care about it.

One of the main purpose of pre mobility preparation, was to spread alternatives to food waste, thought app as too good to go, a method used by a lot of persons. The app works in different countries but in some it doesn't exist.
